

**Tip of the month!**

## Insulation material around heatsinks:

As producers of heatsinks we are familiar with the importance of a high level of thermal transfer while maintaining electric insulation.

We offer materials and construction forms for the most diverse requirements.

As usual, you can count on quality, a high level of availability and punctual delivery.

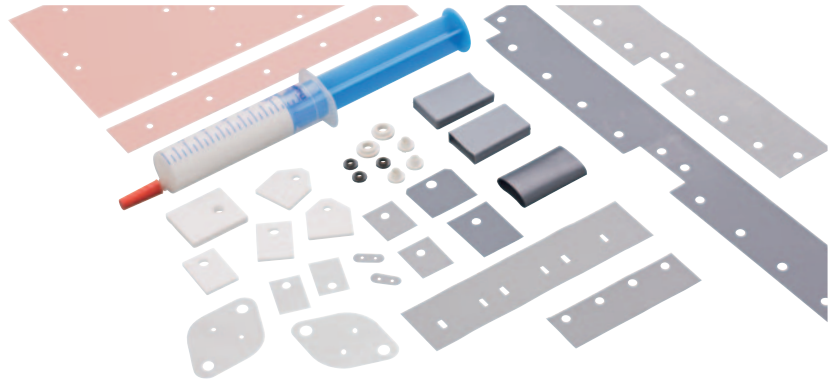

- Silicone insulation wafers (glass fibre reinforced, also self-adhesive)
- Mica insulation wafers (white)
- Aluminium oxide insulation wafers (for high dielectric strength)
- Insulation caps and tubes (e.g. for clip mounting)
- Insulating bushes (SR 25 makrolon)
- Thermal compounds (with or without silicone)
- For the entire range please see the [main catalogue](#) or [www.alutronic.de](http://www.alutronic.de)

### Standard types

Our comprehensive **standard programme** comprises the most different construction forms, materials and strengths for the **most common types** of semi-conductors.

All in stock!

For detailed information please see the main catalogue or [www.alutronic.de](http://www.alutronic.de)

### Custom-made formats

Custom **designed** insulation sheets in all configurations.

**Cost-saving assembly** e.g. by assembling several components on one insulating sheet.

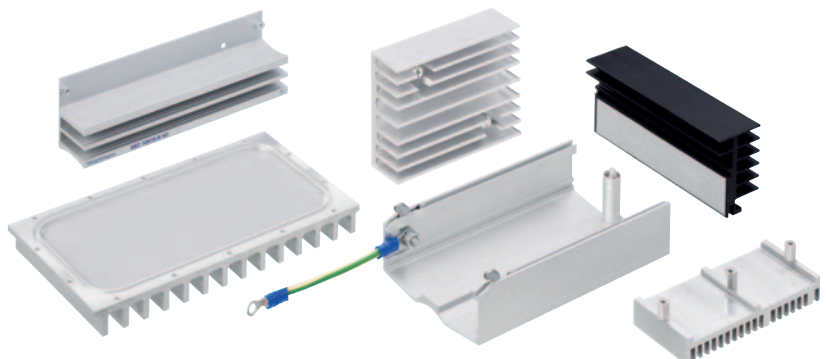

Please see the main catalogue or [www.alutronic.de](http://www.alutronic.de)

**Pre- or partial installation** e.g. with a self-adhesive sheet.

Heatsink incl. insulation sheet assembly, **all under one roof**.
